

DEAD LIFT

A BETTER WAY TO HAUL AWAY

PATENT NUMBER: 12005863

PATENT DATE: 06/11/2024

USING DEAD LIFT IS SIMPLE AND FAST

Lift and transport directly to the hanging pole or cooler. With the Dead Lift, you can confidently carry a deer or cargo across fields, rough wooded trails, old logging roads, gravel, or paved roads—knowing your load is secure. And best of all, it saves your back in the process.

CONVENIENT AND SAFE

Easy to load, lift, and transport! Retrieving a deer in the dark—especially when alone—is now effortless and even enjoyable. Designed and built for strength and reliability.

DIFFICULT RETRIEVALS MADE EASIER

With Dead Lift, pulling a deer from a deep creek or ravine is much easier than traditional methods. By extending the platform over the edge, the strap drops straight down without digging into the dirt bank. It then lifts the deer straight up and away from any obstructions, placing it directly onto the platform for transport.

LESS MESS

Dried blood and mud on the sides or back of your vehicle can be a hassle to scrub or power wash off. With Dead Lift, you can keep your truck bed and gear clean while transporting your deer with ease.

PLATFORM TILT/DUMP

Removing the hinge pin lets you tilt and dump a load from the raised position. Alternatively, with the pin removed, the platform tilts as it lifts for a controlled, ground-level dump on softer terrain.
