

# KFI Pro-Series UTV Plow System

The KFI UTV Pro-Series system is designed to have all the same great features as our ATV system with more design put into strengthening the UTV system to withstand the forces of the larger UTV's.

The KFI UTV plow system is engineered as a Front-Mount System that transfers the forces from plowing to the front lower frame. The system is attached in seconds using two standard 5/8" hitch pins. With this Front Mount System you will get 30+ inches of lift height. All of the plow components are shot blasted and powder coated tough for the best finish available.

Our NEW Heavy-Duty 11ga 72" UTV Blade comes standard with a 7" top rubber snow flap, Heavy-Duty Skid Pads, two sided 3/16" GRADE 50 wear bar, and added gusseting for increased strength to handle the wider width and force of your UTV.

The UTV Plow Tube System will work with our standard 11GA 54" and 60" Straight Blades, 60" Tapered Blade, and our all new UTV 72" reinforced Straight Blade. Features of our heavily reinforced tube system include: an easy-pull pin blade adjustment, multi-position plow lift bracket, 5 blade angle positions that will rotate the blade up to 25°, and six 5° blade pitch adjustments.

### Plow Mounts Available for the following:

*(see mount plate chart for mount #'s and application years)*
